

## TRANSFER UNIT

# Your convenient solution for UltraCam data transfer

The Transfer Unit is Vexcel's state-of-the-art device designed to facilitate seamless data transfer from UltraCam systems. Housing a PC and a docking bay for 4th generation Data Units, the Transfer Unit enables efficient download and management of UltraCam data. Pre-configured with Windows OS, it allows operators to download data directly from the Data Unit using UltraMap Raw Data Center. This software provides options to transfer data either to a local network or copy it to external USB drives, ensuring flexible data management.

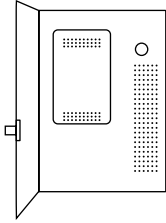

Designed for rapid data download, the Transfer Unit is hot-pluggable, allowing Data Units to be inserted and removed during operation without interruption. Due to its integrated computing power, immediate quality control of collected data and processing of individual images is fully supported.

Vexcel's Transfer Unit comes with a robust protective case and power cables for EU/US. It provides operators with thoughtfully designed equipment to support efficient and effective aerial data handling.

## SPECIFICATIONS & DETAILS

### PHYSICAL SPECIFICATIONS
